

TABLE 3
THE AMERICAN FERTILITY SOCIETY CLASSIFICATION OF TUBAL OCCLUSION
SECONDARY TO TUBAL LIGATION

Patient's Name _____ Date _____ Chart # _____

Age _____ G _____ P _____ Sp Ab _____ VTP _____ Ectopic _____ Infertile Yes _____ No _____

Other Significant History (i.e. surgery, infection, etc.) _____

HSG _____ Sonography _____ Photography _____ Laparoscopy _____ Laparotomy _____

Segmental length (cm) (Extramural)	AFTER REPAIR	
	Proximal	Distal
Right	_____	_____
Left	_____	_____

Additional Findings: _____

Treatment (Surgical Procedures):	Right	Left
ANASTOMOSIS	_____	_____
IM-IS	_____	_____
IM-AM	_____	_____
IS-IS	_____	_____
IS-AM	_____	_____
AM-AM	_____	_____

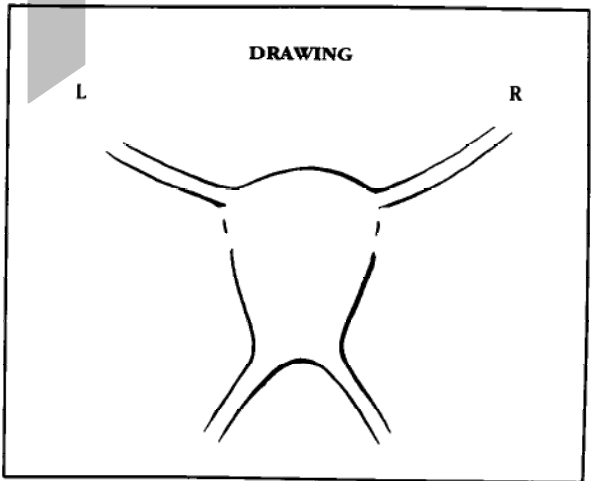

Other: _____

Prognosis for Conception & Subsequent Viable Infant*

- _____ Excellent (> 75%)
- _____ Good (50-75%)
- _____ Fair (25%-50%)
- _____ Poor (< 25%)

* Physician's judgment based upon adnexa with least amount of pathology.

Recommended Followup Treatment: _____
